

Automatic Rotating Fiber Holder

FHRA/FHRAW

The rotary fiber holder is used to rotate and adjust the polarization plane of polarization-maintaining fiber. This fiber holder is attached to the holder mounting part of the alignment unit and requires the FHRA-BP (sold separately). In addition, the fiber retention part is removable with magnets for smooth fiber attachment and removal.

- A magnetizing bolt is built into the plastic holder, and the magnetic force of the fiber holder's magnet gently clamps the polarization-maintaining fiber.
- The fiber retention part can be removed by a magnet.
- By using the auto-rotating fiber holder fixing plate (FHRA-BP), this fiber holder can be incorporated into the DAU-8100A series alignment unit.

Guide

- We have two types of fiber holders: the FHRAW series with a suction function at the tip and the FHRA series without a suction function.
- We also have three jacket diameters of 250 μm , 400 μm , and 900 μm . All cladding diameters are specified at 125 μm .
- The FHRAW series comes with a vacuum suction tube (2 m).
- Rotating fiber holders (FHRM series) are also available.

Attention

- When removing the fiber retention unit, please do so at the 0 degree position.
- In addition, a vacuum pump is required to use the suction mechanism. Please contact our sales department for information on vacuum pump peripheral equipment.
